

Question ID 02fd3da7

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 02fd3da7

Text 1

Public policy researcher Anthony Fowler studied the history of elections in Australia, a country that requires citizens to vote. Fowler argues that requiring citizens to vote leads to a significant increase in voters who would otherwise not have the time or motivation to vote. Thus, election results in countries that require citizens to vote better reflect the preferences of the country as a whole.

Text 2

Governments in democratic countries function better when more people vote. However, forcing people to vote may have negative consequences. Shane P. Singh and Jason Roy studied what happens when a country requires its citizens to vote. They found that when people feel forced to vote, they tend to spend less time looking for information about their choices when voting. As a result, votes from these voters may not reflect their actual preferences.

Based on the texts, how would Singh and Roy (Text 2) most likely respond to the research discussed in Text 1?

- A. Only countries of a certain population size should implement mandatory voting.
- B. People who are forced to vote are likely to become politically engaged in other ways, such as volunteering or running for office.
- C. Requiring people to vote does not necessarily lead to election outcomes that better represent the preferences of the country as a whole.
- D. Countries that require voting must also make the process of voting easier for their citizens.

ID: 02fd3da7 Answer

Correct Answer: C

Rationale

Choice C is the best answer. Text 1 claims that mandatory voting results in elections that "better reflect the preferences of the country." Singh and Roy disagree. They claim that more voters doesn't equal more quality votes—instead, they argue that forced voting may lead to less-informed votes that "may not reflect [voters'] actual preferences."

Choice A is incorrect. Neither text mentions the population size of countries that require voting, or how that might affect election outcomes. Choice B is incorrect. Neither text discusses the effects of mandatory voting on other forms of political engagement. Choice D is incorrect. Neither text discusses the ease or difficulty of the voting process in countries that require voting.

Question Difficulty: Easy

Question ID 8d802289

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 8d802289

Text 1

Dance choreographer Alvin Ailey’s deep admiration for jazz music can most clearly be felt in the rhythms and beats his works were set to. Ailey collaborated with some of the greatest jazz legends, like Charles Mingus, Charlie Parker, and perhaps his favorite, Duke Ellington. With his choice of music, Ailey helped bring jazz to life for his audiences.

Text 2

Jazz is present throughout Ailey’s work, but it’s most visible in Ailey’s approach to choreography. Ailey often incorporated improvisation, a signature characteristic of jazz music, in his work. When managing his dance company, Ailey rarely forced his dancers to an exact set of specific moves. Instead, he encouraged his dancers to let their own skills and experiences shape their performances, as jazz musicians do.

Based on the texts, both authors would most likely agree with which statement?

- A. Dancers who worked with Ailey greatly appreciated his supportive approach as a choreographer.
- B. Ailey’s work was strongly influenced by jazz.
- C. Audiences were mostly unfamiliar with the jazz music in Ailey’s works.
- D. Ailey blended multiple genres of music together when choreographing dance pieces.

ID: 8d802289 Answer

Correct Answer: B

Rationale

Choice B is the best answer. Author 1 states that Ailey had a “deep admiration for jazz music” and that he “helped bring jazz to life for his audiences.” Author 2 states that “Jazz is present throughout Ailey’s work.” While the authors name different aspects of Ailey’s work as the most influenced by jazz, they agree that jazz was a strong influence.

Choice A is incorrect. This isn’t something that either text claims. Neither text mentions how Ailey’s dancers felt about his approach as a choreographer, so we have no evidence that either author would agree with this. Choice C is incorrect. This isn’t something that either text claims. Neither text mentions how familiar audiences were with any aspect of Ailey’s works, so we have no evidence that either author would agree with this. Choice D is incorrect. This isn’t something that either text claims. Neither text mentions any genre of music other than jazz, so we have no evidence that either author would agree with this.

Question Difficulty: Easy

Question ID 7bf79a90

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 7bf79a90

Text 1

Microbes are tiny organisms in the soil, water, and air all around us. They thrive even in very harsh conditions. That’s why Noah Fierer and colleagues were surprised when soil samples they collected from an extremely cold, dry area in Antarctica didn’t seem to contain any life. The finding doesn’t prove that there are no microbes in that area, but the team says it does suggest that the environment severely restricts microbes’ survival.

Text 2

Microbes are found in virtually every environment on Earth. So it’s unlikely they would be completely absent from Fierer’s team’s study site, no matter how extreme the environment is. There were probably so few organisms in the samples that current technology couldn’t detect them. But since a spoonful of typical soil elsewhere might contain billions of microbes, the presence of so few in the Antarctic soil samples would show how challenging the conditions are.

- Based on the texts, Fierer’s team and the author of Text 2 would most likely agree with which statement about microbes?
- A. Most microbes are better able to survive in environments with extremely dry conditions than in environments with harsh temperatures.
 - B. A much higher number of microbes would probably be found if another sample of soil were taken from the Antarctic study site.
 - C. Microbes are likely difficult to detect in the soil at the Antarctic study site because they tend to be smaller than microbes found in typical soil elsewhere.
 - D. Most microbes are probably unable to withstand the soil conditions at the Antarctic study site.

ID: 7bf79a90 Answer

Correct Answer: D

Rationale

Choice D is the best answer because it presents a statement about microbes with which Fierer’s team (Text 1) and the author of Text 2 would most likely agree. Text 1 states that microbes usually thrive in very harsh conditions, and so Fierer’s team was surprised when samples collected from an extremely cold and dry area of Antarctica didn’t appear to contain any life. Fierer’s team says that though this doesn’t conclusively prove there are no microbes in the area, it suggests that microbes would have a notably difficult time surviving in the environment. The author of Text 2 says it’s unlikely that there would be no microbes at all in the Antarctic study site from which Fierer’s team retrieved soil samples and that there may have been hard-to-detect microbes in the samples. However, the presence of only a few microbes in the Antarctic samples rather than the billions found in a typical soil sample (which would presumably be much easier to detect) would illustrate conditions in the Antarctic soil that make it difficult for microbes to thrive. Since Fierer’s team says that the seeming absence of microbes in the Antarctic samples suggests an unusually harsh environment and the author of Text 2 says that even if there are a few undetectable microbes in the samples, the relatively tiny number of microbes would also suggest an

unusually harsh environment, then Fierer's team and the author of Text 2 would most likely agree that most microbes are unable to withstand the soil conditions at the Antarctic study site.

Choice A is incorrect. The samples taken by Fierer's team were from an area of Antarctica that is described in part as extremely dry, and these samples didn't appear to have any life. Therefore, even though these samples also came from an extremely cold area, Fierer's team wouldn't argue based on the evidence available that microbes were better able to survive in dry conditions than in areas with harsh temperatures. Moreover, the author of Text 2 says that microbes are found in virtually every environment on Earth but doesn't compare dry environments and harsh environments. Choice B is incorrect. Nothing in Text 1 indicates that another collection of samples from the Antarctic study site might yield different results from the samples already taken by Fierer's team. The author of Text 2 does state that microbes are found in virtually every environment on Earth and suggests that new technology may be better able to detect so few microbes in a soil sample, but the author of Text 2 concludes that the unusual absence of microbes in the Antarctic samples is evidence of the harsh Antarctic environment. Therefore, there is no reason to believe that the author of Text 2 thinks that another sample drawn from that same harsh environment would yield a much higher number of microbes. Choice C is incorrect. The author of Text 2 does speculate that there may have been so few microbes in the Antarctic samples that current technology couldn't detect them, but the author doesn't speculate that this is due to the size of the microbes. Moreover, nothing that Fierer's team says suggests that they are speculating that their samples might have microbes that are smaller than microbes in typical soil samples.

Question Difficulty: Medium

Question ID 835d1ae6

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 835d1ae6

Text 1

Historians studying pre-Inca Peru have looked to ceramic vessels to understand daily life among the Moche people. These mold-made sculptures present plants, animals, and human faces in precise ways—vessels representing human faces are so detailed that scholars have interpreted facial markings to represent scars and other skin irregularities. Some historians have even used these objects to identify potential skin diseases that may have afflicted people at the time.

Text 2

Art historian and archaeologist Lisa Trever has argued that the interpretation of Moche “portrait” vessels as hyper-realistic portrayals of identifiable people may inadvertently disregard the creativity of the objects’ creators. Moche ceramic vessels, Trever argues, are artworks in which sculptors could free their imagination, using realistic objects and people around them as inspiration to explore more abstract concepts.

Based on the texts, what would Lisa Trever (Text 2) most likely say about the interpretation presented in the underlined portion of Text 1?

- A. Depictions of human faces are significantly more realistic than depictions of plants and other animals are.
- B. It is likely that some depictions of human faces with extensive markings are intended to portray the same historical individual.
- C. Some vessels may have been damaged during their excavation and thus provide little insight into Moche culture.
- D. Markings on depictions of human faces are not necessarily intended to portray particular details about the physical appearance of individuals.

ID: 835d1ae6 Answer

Correct Answer: D

Rationale

Choice D is the best answer. Trever thinks that the “hyper-realistic portrayal of identifiable people” interpretation ignores the sculptors’ imagination and creativity. We can infer that Trevor thinks the facial markings on the sculptures may not have represented real skin blemishes on real people.

Choice A is incorrect. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. Neither text compares the depictions of human faces to the depictions of plants or animals, so we have no basis to draw this conclusion. Choice B is incorrect. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. There’s nothing in either text about multiple depictions representing the same person, so we have no basis to draw this conclusion. Choice C is incorrect. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. Neither text mentions the state of the vessels (damaged or intact), so we have no basis to draw this conclusion.

Question ID 81da17d3

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 81da17d3

Text 1

Italian painters in the 1500s rarely depicted themselves in their work. Even more rare were self-portrait paintings that portrayed the artist as a painter. At the time, painting was not yet respected as a profession, so painters mostly chose to emphasize other qualities in their self-portraits, like their intellect or social status. In the city of Bologna, the first artist to depict himself painting was a man named Annibale Carracci. A painting of his from around 1585 shows Carracci in front of an easel holding a palette.

Text 2

In their self-portraits, Bolognese artists typically avoided referring to the act of painting until the mid-1600s. However, Lavinia Fontana’s 1577 painting, *Self-Portrait at the Keyboard*, stands out as the earliest example of such a work by an artist from Bologna. Although the artist is depicted playing music, in the background, one can spot a painting easel by a window.

Based on the texts, how would the author of Text 2 most likely respond to the underlined claim in Text 1?

- A. Carracci and Fontana were among the most well-respected painters in Bologna at the time.
- B. The depiction of Fontana in *Self-Portrait at the Keyboard* was intended to underscore the artist’s creativity.
- C. Fontana likely inspired the reference to an easel and palette in Carracci’s painting.
- D. *Self-Portrait at the Keyboard* was painted earlier than Carracci’s painting and also refers to the artist’s craft.

ID: 81da17d3 Answer

Correct Answer: D

Rationale

Choice D is the best answer. The author of Text 2 states that Fontana’s painting, which depicts a painting easel in the background, was made in 1577, eight years before Carracci’s painting. Therefore, they might argue that Caracci was not “the first artist” to depict himself as a painter.

Choice A is incorrect. The texts don’t support this choice. Neither text mentions the reputation or status of either Carracci or Fontana. Choice B is incorrect. The author of Text 2 does not comment on the intention or meaning of Fontana’s self-depiction in *Self-Portrait at the Keyboard*. This choice also holds little connection to the underlined claim. Choice C is incorrect. The texts don’t support this choice. The author of Text 2 does not suggest any inspirational relationship between Fontana and Carracci. The author of Text 2 is concerned with showing that Fontana’s painting is the earliest example of an artist referring to painting in their self-portrait, but makes no mention of her influence on others.

Question Difficulty: Easy

Question ID 8de51658

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 8de51658

Text 1

The idea that time moves in only one direction is instinctively understood, yet it puzzles physicists. According to the second law of thermodynamics, at a macroscopic level some processes of heat transfer are irreversible due to the production of entropy—after a transfer we cannot rewind time and place molecules back exactly where they were before, just as we cannot unbreak dropped eggs. But laws of physics at a microscopic or quantum level hold that those processes *should* be reversible.

Text 2

In 2015, physicists Tiago Batalhão et al. performed an experiment in which they confirmed the irreversibility of thermodynamic processes at a quantum level, producing entropy by applying a rapidly oscillating magnetic field to a system of carbon-13 atoms in liquid chloroform. But the experiment “does not pinpoint ... what causes [irreversibility] at the microscopic level,” coauthor Mauro Paternostro said.

Based on the texts, what would the author of Text 1 most likely say about the experiment described in Text 2?

- A. It would suggest an interesting direction for future research were it not the case that two of the physicists who conducted the experiment disagree on the significance of its findings.
- B. It provides empirical evidence that the current understanding of an aspect of physics at a microscopic level must be incomplete.
- C. It is consistent with the current understanding of physics at a microscopic level but not at a macroscopic level.
- D. It supports a claim about an isolated system of atoms in a laboratory, but that claim should not be extrapolated to a general claim about the universe.

ID: 8de51658 Answer

Correct Answer: B

Rationale

Choice B is the best answer. Author 1 describes the puzzle that physicists still can’t solve: at a microscopic level, the “laws of physics” suggest that we should be able to reverse processes that are not reversible at a macroscopic level (and, maybe, turn back time!). The experiment confirmed that those processes are not reversible even on the microscopic level, but it didn’t explain why. This supports Author 1’s point that physicists still don’t fully understand how things work at a microscopic level—maybe the laws need to be revised.

Choice A is incorrect. We can’t infer that the author of Text 1 would respond this way to the experiment. Text 2 does name two of the physicists involved in the experiment, but it never suggests that they disagree on anything. Choice C is incorrect. This is the opposite of what the experiment suggests. The experiment confirmed that the macroscopic-level law (“these things can’t be reversed—like time”) was still true on the microscopic level—meaning it supports the current understanding of

physics at a macroscopic level. Choice D is incorrect. We can't infer that the author of Text 1 would respond this way to the experiment. Neither text makes this distinction between laboratory findings and the way the universe works in general.

Question Difficulty: Medium

Question ID e1befb41

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: e1befb41

Text 1

In a study of the benefits of having free time, Marissa Sharif found that the reported sense of life satisfaction tended to plateau when participants had two hours of free time per day and actually began to fall when they had five hours of free time per day. After further research, Sharif concluded that this dip in life satisfaction mainly occurred when individuals spent all their free time unproductively, such as by watching TV or playing games.

Text 2

Psychologist James Maddux cautions against suggesting an ideal amount of free time. The human desire for both free time and productivity is universal, but Maddux asserts that individuals have unique needs for life satisfaction. Furthermore, he points out that there is no objective definition for what constitutes productivity; reading a book might be considered a productive activity by some, but idleness by others.

Based on the texts, how would Maddux (Text 2) most likely respond to the conclusion Sharif (Text 1) reached after her further research?

- A. By acknowledging that free time is more likely to enhance life satisfaction when it is spent productively than when it is spent unproductively
- B. By challenging the reasoning in Text 1, as it has not been proved that productivity commonly contributes to individuals' life satisfaction
- C. By warning against making an overly broad assumption, as there is no clear consensus in distinguishing between productive and unproductive activities
- D. By claiming that the specific activities named in Text 1 are actually examples of productive activities rather than unproductive ones

ID: e1befb41 Answer

Correct Answer: C

Rationale

Choice C is the best answer because it characterizes how Maddux would most likely respond to the conclusion Sharif reached after her research. Text 1 describes Sharif's study of the benefits of free time, saying that the reported sense of satisfaction plateaued at two hours per day and began to decline at five hours per day. Further research led Sharif to conclude that time spent doing tasks she defines as unproductive, such as watching TV or playing games, correlated with a drop in life satisfaction. However, in Text 2 Maddux says that there is no objective definition of what constitutes productive behavior, giving the example that reading a book might be considered productive by some but unproductive by others. It can be inferred that Maddux would also assert that whether watching TV or playing games is productive or unproductive is a

matter of subjective judgment. Thus, Maddux would most likely caution against making an overly broad assumption, as there is no clear consensus in distinguishing between productive and unproductive activities.

Choice A is incorrect because Maddux asserts that individuals have unique needs for life satisfaction: some may want to spend that time productively, others unproductively, and what counts as productive is subjective. Therefore, Maddux would likely not consider it universally true that free time is more likely to enhance life satisfaction when it is spent productively. Choice B is incorrect because the study described in Text 1 concerns whether free time contributes to life satisfaction, not whether productivity contributes to life satisfaction. The dip in life satisfaction that Sharif claims to observe in Text 1 happens only after five hours, and mainly if the time is spent unproductively—that is, two hours of free time spent productively might increase life satisfaction just as much as two hours spent unproductively. Choice D is incorrect because Maddux holds the opinion that whether an activity is productive or unproductive is subjective and depends on the individual; therefore, he would most likely claim that watching TV or playing games might be productive for some and unproductive for others.

Question Difficulty: Medium

Question ID c68ceeff

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: c68ceeff

Text 1

Today the starchy root cassava is found in many dishes across West Africa, but its rise to popularity was slow. Portuguese traders brought cassava from Brazil to the West African coast in the 1500s. But at this time, people living in the capitals further inland had little contact with coastal communities. Thus, cassava remained relatively unknown to most of the region’s inhabitants until the 1800s.

Text 2

Cassava’s slow adoption into the diet of West Africans is mainly due to the nature of the crop itself. If not cooked properly, cassava can be toxic. Knowledge of how to properly prepare cassava needed to spread before the food could grow in popularity. The arrival of formerly enslaved people from Brazil in the 1800s, who brought their knowledge of cassava and its preparation with them, thus directly fueled the spread of this crop.

Based on the texts, the author of Text 1 and the author of Text 2 would most likely agree with which statement?

- A. Cassava did not become a significant crop in West Africa until long after it was first introduced.
- B. Several of the most commonly grown crops in West Africa are originally from Brazil.
- C. The climate of the West African coast in the 1500s prevented cassava’s spread in the region.
- D. The most commonly used methods to cook cassava today date to the 1500s.

ID: c68ceeff Answer

Correct Answer: A

Rationale

Choice A is the best answer. Text 1 states that cassava’s “rise to popularity was slow” in West Africa. Text 2 also describes cassava’s “slow adoption into the diet of West Africans.” While the two texts identify different causes for this slow adoption, both agree that cassava took a long time to catch on.

Choice B is incorrect. This isn’t something that either text claims. Cassava is the only crop discussed in the passages, so we have no basis to draw conclusions about what the authors might say about “several” crops. Choice C is incorrect. This isn’t something that either text claims. Neither text mentions the “climate of the West African coast,” so we have no evidence that either author would agree with this. Choice D is incorrect. This isn’t something that either text claims. The 1500s were when cassava was brought to West Africa, but neither text describes how cassava is cooked, nor do they make any claims about when cooking methods were developed.

Question Difficulty: Easy

Question ID 82c05b34

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 82c05b34

Text 1

The live music festival business is growing in event size and genre variety. With so many consumer options, organizers are finding ways to cement festival attendance as a special experience worth sharing. This phenomenon is linked to the growing “experiential economy,” where many find it gratifying to purchase lived experiences. To ensure a profitable event, venues need to consider the overall consumer experience, not just the band lineup.

Text 2

Music festival appearances are becoming a more important part of musicians’ careers. One factor in this shift is the rising use of streaming services that allow access to huge numbers of songs for a monthly fee, subsequently reducing sales of full-length albums. With this shift in consumer behavior, musicians are increasingly dependent on revenue from live performances.

- Based on the texts, both authors would most likely agree with which statement?
- A. Consumers are more interested in paying subscription fees to stream music than in attending music festivals in person.
 - B. Consumers’ growing interest in purchasing experiences is mostly confined to the music industry.
 - C. Changing consumer behaviors are leading to changes in music-related businesses.
 - D. The rising consumer demand for live music festivals also generates higher demand for music streaming platforms.

ID: 82c05b34 Answer

Correct Answer: C

Rationale

Choice C is the best answer. Both authors mention how consumer behaviors have shifted, and how this affects different aspects of the music industry. Text 1 states that consumers enjoy purchasing “lived experiences,” and that this influences how organizers design music festivals. Text 2 states that consumers are using streaming services more, and that this reduces album sales and increases the importance of live performances for musicians.

Choice A is incorrect. Neither text claims that consumers prefer streaming to festivals, or that these are mutually exclusive options. Text 1 implies that festivals are popular and profitable, and Text 2 never suggests that streaming services diminish the demand for live music. Choice B is incorrect. This choice misreads Text 1, which identifies music festivals as just one example of a broader trend of purchasing “lived experiences.” Text 2 doesn’t mention growing interest in purchasing experiences, in the music industry or otherwise. Choice D is incorrect. Neither text establishes a cause/effect relationship between the demand for festivals and the demand for streaming platforms. Text 1 does not mention streaming platforms at all, and Text 2 does not imply that streaming platforms benefit from the popularity of festivals.

Question Difficulty: Medium

Question ID 5a4b147c

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 5a4b147c

Text 1

On April 26th, 1777, Sybil Ludington rode 40 miles by horse through Putnam County, New York, to gather up local militia. British forces were burning nearby Danbury, Connecticut, and Ludington wanted to rally rebel troops to meet them. Although she was only 16 years old at the time, her brave feat made Ludington one of the heroes of the American Revolution. Since then, Ludington has been widely celebrated, inspiring postage stamps, statues, and even children’s TV series.

Text 2

Historian Paula D. Hunt researched the life and legacy of Sybil Ludington but found no evidence for her famous ride. Although many articles and books have been written about Ludington, Hunt believes writers may have been inventing details about Ludington as they retold her story. Ludington is revered by Americans today, but there simply isn’t a strong historical record of her heroic ride.

Based on the texts, both authors would most likely agree with which statement?

- A. Sybil Ludington was crucial to the outcome of the Revolutionary War.
- B. Historians have confirmed which route Sybil Ludington took.
- C. Sybil Ludington was likely not a real person.
- D. Many people have come to admire the story of Sybil Ludington’s ride.

ID: 5a4b147c Answer

Correct Answer: D

Rationale

Choice D is the best answer. Both authors agree that Ludington’s story has been widely celebrated and revered by Americans, even if they disagree on its accuracy. Text 1 states that Ludington has inspired postage stamps, statues, and TV series, and Text 2 states that many articles and books have been written about her. Thus, both authors acknowledge the popularity of Ludington’s story.

Choice A is incorrect. Neither author claims that Ludington had a significant impact on the war. Text 1 doesn’t mention how Ludington’s ride affected the war overall, and Text 2 suggests that Ludington’s ride may have been exaggerated or invented over time. Choice B is incorrect. Neither author claims that Ludington’s route has been verified by historians. Text 1 claims she rode 40 miles through Putnam County, but doesn’t cite any sources for this information, while Text 2 suggests the ride may not have even happened. Choice C is incorrect. This choice misreads text 2. Neither author claims that Ludington was not a real person, only that her ride may not have happened. Both authors seem to treat Ludington as a genuine historical figure.

Question Difficulty: Easy

Question ID 9645f55e

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 9645f55e

Text 1

For decades, bluegrass musicians have debated whether their genre should exclude influences from mainstream genres such as rock. Many insist that bluegrass is defined by its adherence to the folk music of the US South, out of which bluegrass emerged. Such “purists,” as they are known, regard the recordings of Bill Monroe, which established the bluegrass sound in the 1940s, as a standard against which the genre should still be measured.

Text 2

Bluegrass isn’t simply an extension of folk traditions into the era of recorded music. In reality, Bill Monroe created the bluegrass sound in the 1940s by combining Southern folk music with commercial genres that had arisen only a few decades before, such as jazz and the blues. Since bluegrass has always been a mixed genre, contemporary bluegrass musicians should not be forbidden from incorporating into it influences from rock and other mainstream genres.

Based on the texts, how would the author of Text 2 most likely regard the perspective of bluegrass purists, as described in Text 1?

- A. As inconsistent, since bluegrass purists themselves enjoy other musical genres
- B. As unrealistic, since bluegrass purists have no way of enforcing their musical preferences
- C. As shortsighted, because bluegrass could enlarge its audience by including influences from mainstream genres
- D. As illogical, because the purists overlook crucial aspects of how the bluegrass sound first originated.

ID: 9645f55e Answer

Correct Answer: D

Rationale

Choice D is the best answer. According to Author 1, the “purists” argue that bluegrass should stick to its folk music roots. But Author 2 points out that this isn’t how bluegrass emerged: it actually got its sound from a mix of folk, jazz, and blues.

Choice A is incorrect. There’s nothing in Text 2 about what other genres the purists enjoy, so this inference about Author 2’s views isn’t supported. Choice B is incorrect. There’s nothing in Text 2 about whether or how purists can enforce their preferences, so this inference about Author 2’s views isn’t supported. Choice C is incorrect. There’s nothing in Text 2 about the size of bluegrass’s audience, so this inference about Author 2’s views isn’t supported.

Question Difficulty: Easy

Question ID f1c9d2c1

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: f1c9d2c1

Text 1

Stage lighting theorist Adolphe Appia was perhaps the first to argue that light must be considered alongside all the various elements of a stage to create a single, unified performance. Researcher Kelly Bremner, however, has noted that Appia lacked technical expertise in the use of light in the theater. As a result of Appia’s inexperience, Bremner argues, Appia’s theory of light called for lighting practices that weren’t possible until after the advent of electricity around 1881.

Text 2

Adolphe Appia was not an amateur in the practice of lighting. Instead, it is precisely his exposure to lighting techniques at the time that contributed to his theory on the importance of light. When working as an apprentice for a lighting specialist in his youth, Appia observed the use of portable lighting devices that could be operated by hand. This experience developed his understanding of what was possible in the coordination of elements on the stage.

Based on the texts, how would the author of Text 2 most likely respond to the claim about Appia’s level of technical expertise made by Bremner in Text 1?

- A. Many lighting technicians dismissed Appia’s ideas about light on the stage.
- B. Appia likely gained a level of technical expertise during his time as an apprentice.
- C. Theater practitioners who worked with Appia greatly admired his work.
- D. Appia was unfamiliar with the use of music and sound in theater.

ID: f1c9d2c1 Answer

Correct Answer: B

Rationale

Choice B is the best answer. The author of Text 2 directly contradicts Bremner’s claim that Appia lacked technical expertise by stating that Appia was “not an amateur in the practice of lighting.” His experience as a lighting specialist’s apprentice would have, the author of Text 2 argues, allowed Appia to “[develop] his understanding of what was possible” with the elements of theatrical design.

Choice A is incorrect. Neither text describes how other lighting technicians responded to Appia’s ideas. Furthermore, this claim isn’t relevant to Bremner’s evaluation of Appia’s technical expertise. Choice C is incorrect. Neither text mentions anything about the opinions of theater practitioners who worked with Appia, so this answer choice does not relate to the claim about Appia’s level of technical expertise made by Bremner in Text 1. Choice D is incorrect. Neither text mentions anything about Appia’s familiarity with or ignorance of the use of music and sound in theater. Both focus on his expertise (or lack thereof) in lighting.

Question Difficulty: Medium

ID: dc043599

Text 1

Most scientists agree that the moon was likely formed after a collision between Earth and a large planet named Theia. This collision likely created a huge debris field, made up of material from both Earth and Theia. Based on models of this event, scientists believe that the moon was formed from this debris over the course of thousands of years.

Text 2

Researchers from NASA’s Ames Research Center used a computer to model how the moon could have formed. Although simulations of the moon’s formation have been done in the past, the team from NASA ran simulations that were much more detailed. They found that the formation of the moon was likely not a slow process that took many years. Instead, it’s probable that the moon’s formation happened immediately after impact, taking just a few hours.

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view the evidence for the formation of the moon?

- A. The author of Text 1 argues that the formation of the moon occurred much earlier than the author of Text 2 argues.
- B. The author of Text 1 suggests there is more evidence confirming the existence of Theia than the author of Text 2 suggests.
- C. The author of Text 1 claims that the moon’s surface is more similar to Earth’s surface than the author of Text 2 claims.
- D. The author of Text 1 believes that the moon formed more slowly than the author of Text 2 believes.

ID: dc043599 Answer

Correct Answer: D

Rationale

Choice D is the best answer. Text 1 states that the moon was formed from the debris “over the course of thousands of years,” while Text 2 states that the moon’s formation happened “immediately after impact, taking just a few hours.” This shows a clear difference in how the authors view the evidence for the speed of the moon’s formation.

Choice A is incorrect. While Text 2 suggests that the moon formed over “just a few hours” and Text 1 says it took “thousands of years,” neither one mentions when that formation occurred. Choice B is incorrect. While Theia isn’t mentioned in Text 2, neither text describes or disputes evidence of Theia’s existence. Choice C is incorrect. Neither text makes any claims about the similarity or difference between the moon’s surface and Earth’s surface.

Question Difficulty: Easy

Question ID eae66bf9

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: eae66bf9

Text 1

In 2021, a team led by Amir Siraj hypothesized that the Chicxulub impactor—the object that struck the Yucatán Peninsula sixty-six million years ago, precipitating the mass extinction of the dinosaurs—was likely a member of the class of long-period comets. As evidence, Siraj cited the carbonaceous chondritic composition of samples from the Chicxulub impact crater as well as of samples obtained from long-period comet Wild 2 in 2006.

Text 2

Although long-period comets contain carbonaceous chondrites, asteroids are similarly rich in these materials. Furthermore, some asteroids are rich in iridium, as Natalia Artemieva points out, whereas long-period comets are not. Given the prevalence of iridium at the crater and, more broadly, in geological layers deposited worldwide following the impact, Artemieva argues that an asteroid is a more plausible candidate for the Chicxulub impactor.

Based on the texts, how would Artemieva likely respond to Siraj’s hypothesis, as presented in Text 1?

- A. By insisting that it overestimates how representative Wild 2 is of long-period comets as a class
- B. By arguing that it does not account for the amount of iridium found in geological layers dating to the Chicxulub impact
- C. By praising it for connecting the composition of Chicxulub crater samples to the composition of certain asteroids
- D. By concurring that carbonaceous chondrites are prevalent in soil samples from sites distant from the Chicxulub crater

ID: eae66bf9 Answer

Correct Answer: B

Rationale

Choice B is the best answer. Siraj’s hypothesis is that the Chicxulub impactor was a long-period comet. But Artemieva points to the iridium found in the crater and in “geological layers that were deposited worldwide after the impact” as evidence that it was actually an asteroid, not a long-period comet.

Choice A is incorrect. We can’t infer that this is how Artemieva would respond to Siraj’s hypothesis. Text 2 never discusses whether Wild 2 is representative of long-period comets in general. Rather, Text 2 presents Artemieva’s argument that the Chicxulub impactor was an asteroid, not a long-term comet. Choice C is incorrect. We can’t infer that this is how Artemieva would respond to Siraj’s hypothesis. Siraj’s hypothesis doesn’t make this connection: rather, Siraj hypothesizes that the Chicxulub impactor was a long-term comet. Choice D is incorrect. We can’t infer that this is how Artemieva would respond to Siraj’s hypothesis. “Soil samples from sites distant from the Chicxulub crater” is too vague. Only soil samples from sites that are connected to the impact in some way are involved in either hypothesis.

Question Difficulty: Medium

Question ID 03080769

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 03080769

Text 1

Philosopher G.E. Moore’s most influential work entails the concept of common sense. He asserts that there are certain beliefs that all people, including philosophers, know instinctively to be true, whether or not they profess otherwise: among them, that they have bodies, or that they exist in a world with other objects that have three dimensions. Moore’s careful work on common sense may seem obvious but was in fact groundbreaking.

Text 2

External world skepticism is a philosophical stance supposing that we cannot be sure of the existence of anything outside our own minds. During a lecture, G.E. Moore once offered a proof refuting this stance by holding out his hands and saying, “Here is one hand, and here is another.” Many philosophers reflexively reject this proof (Annalisa Coliva called it “an obviously annoying failure”) but have found it a challenge to articulate exactly why the proof fails.

Based on the texts, how would the author of Text 1 most likely respond to proponents of the philosophical stance outlined in Text 2?

- A. By agreeing with those proponents that Moore’s treatment of positions that contradict his own is fundamentally unserious
- B. By suggesting that an instinctive distaste for Moore’s position is preventing external world skeptics from constructing a sufficiently rigorous refutation of Moore
- C. By arguing that if it is valid to assert that some facts are true based on instinct, it is also valid to assert that some proofs are inadequate based on instinct
- D. By pointing out that Moore would assert that external world skepticism is at odds with other beliefs those proponents must unavoidably hold

ID: 03080769 Answer

Correct Answer: D

Rationale

Choice D is the best answer. According to the author of Text 1, Moore’s definition of common sense—things we instinctively know are true—includes the belief that we all “exist in a world with other objects.” The author of Text 1 describes this notion as both “obvious” and “groundbreaking.” So it’s safe to infer that the author would observe that Moore would respond to external world skeptics by arguing that since everyone instinctively knows that things exist outside of their own minds, then external world skepticism must be wrong.

Choice A is incorrect. We can’t infer that the author of Text 1 would respond this way to external world skeptics. If anything, the author of Text 1 seems to agree with Moore. Choice B is incorrect. We can’t infer that the author of Text 1 would respond this way to external world skeptics. The author of Text 1 never mentions external world skeptics directly, let alone why they

have a hard time refuting Moore’s position. Choice C is incorrect. We can’t infer that the author of Text 1 would respond this way to external world skeptics. Text 1’s presentation of Moore’s concept of common sense only includes the idea that some facts are true based on instinct—it doesn’t mention the idea that some proofs are inadequate based on instinct.

Question Difficulty: Medium

Question ID 12d81fc1

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 12d81fc1

Text 1

Because literacy in Nahuatl script, the writing system of the Aztec Empire, was lost after Spain invaded central Mexico in the 1500s, it is unclear exactly how meaning was encoded in the script’s symbols. Although many scholars had assumed that the symbols signified entire words, linguist Alfonso Lacadena theorized in 2008 that they signified units of language smaller than words: individual syllables.

Text 2

The growing consensus among scholars of Nahuatl script is that many of its symbols could signify either words or syllables, depending on syntax and content at any given site within a text. For example, the symbol signifying the word *huipil* (blouse) in some contexts could signify the syllable “pil” in others, as in the place name “Chipiltepec.” Thus, for the Aztecs, reading required a determination of how such symbols functioned each time they appeared in a text.

Based on the texts, how would the author of Text 2 most likely characterize Lacadena’s theory, as described in Text 1?

- A. By praising the theory for recognizing that the script’s symbols could represent entire words
- B. By arguing that the theory is overly influenced by the work of earlier scholars
- C. By approving of the theory’s emphasis on how the script changed over time
- D. By cautioning that the theory overlooks certain important aspects of how the script functioned

ID: 12d81fc1 Answer

Correct Answer: D

Rationale

Choice D is the best answer. Lacadena’s theory is that Nahuatl script symbols signified syllables, but the consensus described in Text 2 is that they can signify either symbols or full words, depending on the context. So the author of Text 2 would likely consider Lacadena’s theory too simplistic: it’s missing the importance of the context in determining the meaning of a symbol.

Choice A is incorrect. This conflicts with Text 1’s description of Lacadena’s theory. Lacadena’s theory is that Nahuatl script symbols signified syllables. Choice B is incorrect. This conflicts with Text 1’s description of Lacadena’s theory. Text 1 states that Lacadena’s theory differed from what earlier scholars believed. Choice C is incorrect. We can’t infer that this is how the author of Text 2 would characterize Lacadena’s theory. Neither text mentions how or even if the script changed over time.

Question Difficulty: Medium

Question ID 2c50ed1a

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 2c50ed1a

Text 1

Literary scholars have struggled with the vastness of Nigerian writer Wole Soyinka’s collective works of drama (spanning over 20 plays in total). It is best, however, to understand Soyinka’s body of work as a dramatist chronologically. Soyinka’s progression as a playwright can be considered to fall into three periods, with each one representing a particular thematic and stylistic cohesion: the 1960s, the two decades between 1970 and 1990, and lastly, from roughly 1990 onwards.

Text 2

It is tempting to impose a linear sense of order on the expanse of Wole Soyinka’s body of work as a dramatist. However, critics who have considered Soyinka’s plays to fit neatly into three phases overlook potential commonalities in Soyinka’s work that span across these phases. Additionally, this view may discount significant differences in the styles and content of plays written around the same time.

- Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view the study of Soyinka’s works of drama?
- A. While the author of Text 1 believes that thinking about Soyinka’s works of theater in phases is useful, the author of Text 2 views such an approach as limiting.
 - B. Although the author of Text 1 claims that Soyinka’s style as a dramatist has evolved over time, the author of Text 2 argues that Soyinka’s style has remained consistent throughout his career.
 - C. The author of Text 1 considers Soyinka’s plays to showcase his strongest writing, whereas the author of Text 2 believes that Soyinka’s poetry is where he is most skilled.
 - D. The author of Text 1 argues that Soyinka’s early plays were his most politically charged, whereas the author of Text 2 claims that Soyinka’s most recent plays are the most politicized.

ID: 2c50ed1a Answer

Correct Answer: A

Rationale

Choice A is the best answer. The author of Text 1 states that Soyinka’s progression as a playwright can be considered to fall into three periods, implying that this is a helpful way to understand his works. The author of Text 2, on the other hand, challenges this view and says that it overlooks potential commonalities and differences in Soyinka’s work across what Text 1 calls distinctive stylistic phases.

Choice B is incorrect. This choice overstates the central claim of Text 2. The author of Text 2 argues against the chronological progression supported in Text 1, but does not go so far as to say that Soyinka’s style remained consistent. In fact, Text 2 points out “significant differences in styles and content” among Soyinka’s plays. Choice C is incorrect. Neither of the texts mention Soyinka’s poetry, nor do they rank his dramatic writing relative to his other work. Choice D is incorrect.

Neither text discusses the political aspects of Soyinka's plays, nor do they make any claims about whether they have changed over time.

Question Difficulty: Easy

Question ID ab56a107

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: ab56a107

Text 1

Digital art, the use of digital technology to create or display images, isn't really art at all. It doesn't require as much skill as creating physical art. "Painting" with a tablet and stylus is much easier than using paint and a brush: the technology is doing most of the work.

Text 2

The painting programs used to create digital art involve more than just pressing a few buttons. In addition to knowing the fundamentals of art, digital artists need to be familiar with sophisticated software. Many artists will start by drawing an image on paper before transforming the piece to a digital format, where they can apply a variety of colors and techniques that would otherwise require many different traditional tools.

Based on the texts, how would the author of Text 2 most likely respond to the claims of the author of Text 1?

- A. By arguing that a piece of art created digitally can still be displayed traditionally
- B. By explaining that it's actually much harder to use a tablet and stylus to create art than to use paint and a brush
- C. By insisting that digital art requires artistic abilities and skill even if it employs less traditional tools
- D. By admitting that most digital artists don't think fundamental drawing skills are important

ID: ab56a107 Answer

Correct Answer: C

Rationale

Choice C is the best answer because it reflects how the author of Text 2 would respond to the claims in Text 1. Both texts address skills needed to produce digital art. Text 1 claims that digital art doesn't require the same amount of skill as creating physical art and that "the technology is doing most of the work." Text 2 states that digital art requires "knowing the fundamentals of art" and that many digital artists begin their work on paper and then transfer it to a digital format using "sophisticated software" and "a variety of colors and techniques." Therefore, the author of Text 2 would most likely insist that digital art requires artistic abilities even if it employs less traditional tools.

Choice A is incorrect because neither text discusses nondigital means of displaying art. Choice B is incorrect because the author of Text 2 doesn't address whether it's harder to use a tablet and stylus than it is to use paint and a brush. Text 2 does argue that digital art requires skills that aren't part of the traditional methods for producing art, but the text doesn't address relative difficulty. Choice D is incorrect because the author of Text 2 states that digital artists still need to know "the fundamentals of art" and that many digital artists begin their work by drafting on paper before transferring the work to a digital format.

Question ID f653b273

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: f653b273

Text 1

A tiny, unusual fossil in a piece of 99-million-year-old amber is of the extinct species *Oculudentavis khaungraae*. The *O. khaungraae* fossil consists of a rounded skull with a thin snout and a large eye socket. Because these features look like they are avian, or related to birds, researchers initially thought that the fossil might be the smallest avian dinosaur ever found.

Text 2

Paleontologists were excited to discover a second small fossil that is similar to the strange *O. khaungraae* fossil but has part of the lower body along with a birdlike skull. Detailed studies of both fossils revealed several traits that are found in lizards but not in dinosaurs or birds. Therefore, paleontologists think the two creatures were probably unusual lizards, even though the skulls looked avian at first.

Based on the texts, what would the paleontologists in Text 2 most likely say about the researchers’ initial thought in Text 1?

- A. It is understandable because the fossil does look like it could be related to birds, even though *O. khaungraae* is probably a lizard.
- B. It is confusing because it isn’t clear what caused the researchers to think that *O. khaungraae* might be related to birds.
- C. It is flawed because the researchers mistakenly assumed that *O. khaungraae* must be a lizard.
- D. It is reasonable because the *O. khaungraae* skull is about the same size as the skull of the second fossil but is shaped differently.

ID: f653b273 Answer

Correct Answer: A

Rationale

Choice A is the best answer because it reflects what the paleontologists in Text 2 would most likely say about what the researchers in Text 1 initially thought. Text 1 focuses on the discovery of a strange fossil consisting of the skull of the extinct species *Oculudentavis khaungraae*. According to Text 1, the fossil has features that appear to be avian, or related to birds, which led researchers to initially think that the fossil might be a very small avian dinosaur. Text 2 begins by noting the discovery of a second fossil similar to the one discussed in Text 1, then explains that based on detailed studies of both fossils, paleontologists think that the two creatures were probably unusual lizards, even though the skulls appeared avian at first. This suggests that the paleontologists in Text 2 recognize that the fossils do indeed look like they could be related to birds. For this reason, the paleontologists in Text 2 would most likely say that the initial thought of the researchers in Text 1—that the fossil was avian—is understandable, even if the fossil is probably not avian but rather is from a lizard.

Choice B is incorrect because Text 2 indicates that the fossils initially looked avian, so the paleontologists described in Text 2 wouldn’t be confused by the researchers in Text 1 initially thinking that *O. khaungraae* might be related to birds. The

paleontologists would find that initial thought understandable, not confusing. Choice C is incorrect because Text 1 never mentions lizards, so it wouldn't make sense for the paleontologists in Text 2 to say that the researchers in Text 1 mistakenly assumed that *O. khaungraae* must be a lizard. Choice D is incorrect. Although the paleontologists in Text 2 might agree that the initial thought of the researchers in Text 1 was reasonable, nothing in Text 2 suggests that the two skulls were shaped differently.

Question Difficulty: Medium

Question ID 22105871

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 22105871

Text 1

In a study of insect behavior, Samadi Galpayage and colleagues presented bumblebees with small wooden balls and observed many of the bees clinging to, rolling, and dragging the objects. The researchers provided no external rewards (such as food) to encourage these interactions. The bees simply appeared to be playing—and for no other reason than because they were having fun.

Text 2

Insects do not have cortexes or other brain areas associated with emotions in humans. Still, Galpayage and her team have shown that bumblebees may engage in play, possibly experiencing some kind of positive emotional state. Other studies have suggested that bees experience negative emotional states (for example, stress), but as Galpayage and her team have acknowledged, emotions in insects, if they do indeed exist, are likely very rudimentary.

Based on the texts, how would the author of Text 2 most likely respond to the underlined portion of Text 1?

- A. By objecting that the bees were actually experiencing a negative feeling akin to stress rather than a positive feeling
- B. By arguing that some insects other than bumblebees may be capable of experiencing complex emotional states
- C. By pointing out that even humans sometimes struggle to have fun while engaging in play
- D. By noting that if the bees were truly playing, any positive feelings they may have experienced were probably quite basic

ID: 22105871 Answer

Correct Answer: D

Rationale

Choice D is the best answer. The author of Text 2 agrees with the author of Text 1 that bumblebees may engage in play and possibly experience some kind of positive emotional state. However, the author of Text 2 also qualifies this claim by stating that emotions in insects, if they do exist, are “likely very rudimentary.”

Choice A is incorrect. While Text 2 states that other studies might indicate “negative emotional states” in bees, it does not contradict the findings from the Galpayage study—that the bees might have been having fun. Choice B is incorrect. The author of Text 2 does not mention or imply that any insects, including bumblebees, are capable of experiencing complex emotional states. The author of Text 2 states that if insects do feel emotions, those emotions are “likely very rudimentary.” Choice C is incorrect. The author of Text 2 does not compare or contrast the behavior or emotions of insects and humans, and neither does the author of Text 1.

Question Difficulty: Easy

Question ID 27d9bb69

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 27d9bb69

Text 1

Many studies in psychology have shown that people seek out information even when they know in advance that they have no immediate use for it and that they won’t directly benefit from it. Such findings support the consensus view among researchers of curiosity: namely, that curiosity is not instrumental but instead represents a drive to acquire information for its own sake.

Text 2

While acknowledging that acquiring information is a powerful motivator, Rachit Dubey and colleagues ran an experiment to test whether emphasizing the usefulness of scientific information could increase curiosity about it. They found that when research involving rats and fruit flies was presented as having medical applications for humans, participants expressed greater interest in learning about it than when the research was not presented as useful.

Based on the texts, how would Dubey and colleagues (Text 2) most likely respond to the consensus view discussed in Text 1?

- A. By suggesting that curiosity may not be exclusively motivated by the desire to merely acquire information
- B. By conceding that people may seek out information that serves no immediate purpose only because they think they can use it later
- C. By pointing out that it is challenging to determine when information-seeking serves no goal beyond acquiring information
- D. By disputing the idea that curiosity can help explain apparently purposeless information-seeking behaviors

ID: 27d9bb69 Answer

Correct Answer: A

Rationale

Choice A is the best answer. The researchers in Text 2 recognize that acquiring information is a powerful motivator, but showed that this motivation can still be affected by other factors, like whether or not the information is expected to be useful or not. This suggests that other desires may play a part in driving people to acquire information.

Choice B is incorrect. The consensus view in Text 1 is that people acquire information regardless of whether they think they can use it later. Dubey and colleagues acknowledge this fact (so they don’t claim people seek out information “only” because it might be useful later). Choice C is incorrect. This choice misreads the results of Dubey and colleagues’ study in Text 2. Neither text discusses the difficulty of determining the motivation for information-seeking. Choice D is incorrect. This choice contradicts Text 2, which starts with Dubey and colleagues “acknowledging that acquiring information is a powerful motivator” (i.e., agreeing that curiosity explains the seeking of apparently purposeless information). The research in Text 2 simply suggests that more than just curiosity can motivate information-seeking behavior when the information has a purpose.

Question Difficulty: Medium

Question ID 159ef46d

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 159ef46d

Text 1

Although food writing is one of the most widely read genres in the United States, literary scholars have long neglected it. And within this genre, cookbooks attract the least scholarly attention of all, regardless of how well written they may be. This is especially true of works dedicated to regional US cuisines, whose complexity and historical significance are often overlooked.

Text 2

With her 1976 cookbook *The Taste of Country Cooking*, Edna Lewis popularized the refined Southern cooking she had grown up with in Freetown, an all-Black community in Virginia. She also set a new standard for cookbook writing: the recipes and memoir passages interspersing them are written in prose more elegant than that of most novels. Yet despite its inarguable value as a piece of writing, Lewis’s masterpiece has received almost no attention from literary scholars.

Based on the two texts, how would the author of Text 1 most likely regard the situation presented in the underlined sentence in Text 2?

- A. As typical, because scholars are dismissive of literary works that achieve popularity with the general public
- B. As unsurprising, because scholars tend to overlook the literary value of food writing in general and of regional cookbooks in particular
- C. As justifiable, because Lewis incorporated memoir into *The Taste of Country Cooking*, thus undermining its status as a cookbook
- D. As inevitable, because *The Taste of Country Cooking* was marketed to readers of food writing and not to readers of other genres

ID: 159ef46d Answer

Correct Answer: B

Rationale

Choice B is the best answer. Text 1 states that literary scholars ignore regional cookbooks most of all, even when they have historical significance and are well written. So the author of Text 1 wouldn’t be surprised that scholars ignored Edna Lewis’s cookbook.

Choice A is incorrect. We can’t infer that this is how the author of Text 1 would regard the situation. Text 1 never suggests that scholars are dismissive of popular works in general. Instead, Text 1 says that scholars ignore food writing specifically, despite its popularity—and despite the fact that it can be historically significant and complex. Choice C is incorrect. We can’t infer that this is how the author of Text 1 would regard the situation. Text 1 never suggests that elements of other genres should be kept out of cookbooks. Choice D is incorrect. We can’t infer that this is how the author of Text 1 would regard the situation. Text 1 never discusses how food writing is or should be marketed.

Question ID 7b55e895

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 7b55e895

Text 1

Some animal species, like the leopard, can be found in many kinds of areas. On the other hand, tropical mountain bird species tend to be limited in the types of spaces they can call home. This is because many mountain bird species are only able to survive at very specific elevations. Over time, these species have likely become used to living at a specific temperature. Therefore, these species struggle to survive at elevations that are warmer or colder than they are used to.

Text 2

A new study reviewed observations of nearly 3,000 bird species to understand why tropical mountain bird species live at specific elevations. They noted that when a mountain bird species was found in an area with many other bird species, it tended to inhabit much smaller geographic areas. It is thus likely that competition for resources with other species, not temperature, limits where these birds can live.

Based on the texts, both authors would most likely agree with which statement?

- A. Tropical mountain bird species are restricted in where they can live.
- B. Scientists have better tools to observe tropical mountain birds than they did in the past.
- C. Little is known about how tropical mountain birds build their nests.
- D. Tropical mountain bird species that live at high elevations tend to be genetically similar.

ID: 7b55e895 Answer

Correct Answer: A

Rationale

Choice A is the best answer. Both texts state that tropical mountain bird species have limited ranges or habitats, although they disagree on the reason for this. Text 1 claims that temperature is the main factor that determines where these birds can live, while Text 2 claims that competition with other species is the main factor. However, both texts agree that these birds are not able to survive in many kinds of areas.

Choice B is incorrect. Neither text mentions the tools or methods that scientists use to observe these birds, either now or in the past. Choice C is incorrect. Neither text mentions anything about how these birds build their nests. Choice D is incorrect. Neither text provides any information about the genetic similarity of these birds, so we have no evidence that either author would agree with this statement.

Question Difficulty: Easy

Question ID c106b9f7

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: c106b9f7

Text 1

American sculptor Edmonia Lewis is best known for her sculptures that represent figures from history and mythology, such as *The Death of Cleopatra* and *Hagar*. Although Lewis sculpted other subjects, her career as a sculptor is best represented by the works in which she depicted these historical and mythical themes.

Text 2

Art historians have typically ignored the many portrait busts Edmonia Lewis created. Lewis likely carved these busts (sculptures of a person’s head) frequently throughout her long career. She is known for her sculptures that represent historical figures, but Lewis likely supported herself financially by carving portrait busts for acquaintances who paid her to represent their features. Thus, Lewis’s portrait busts are a central aspect of her career as a sculptor.

Based on the texts, both authors would most likely agree with which statement?

- A. Lewis’s portrait busts have overshadowed her other work.
- B. *The Death of Cleopatra* is Lewis’s most famous piece.
- C. Sculpting representations of historical figures was a short-lived trend.
- D. Lewis’s works are varied in the subjects they depict.

ID: c106b9f7 Answer

Correct Answer: D

Rationale

Choice D is the best answer. Author 1 acknowledges that Lewis sculpted other subjects besides historical and mythical figures, suggesting a variety of subjects depicted. Author 2 mentions that Lewis carved portrait busts as well as historical sculptures, which also implies variation among Lewis’s subjects.

Choice A is incorrect. Neither text suggests that Lewis’s portrait busts have received more attention or appreciation than her other work. Author 1 briefly mentions her “other works,” but mostly focuses on her historical and mythical works. Author 2 states that art historians have typically ignored her portrait busts, which suggests that they haven’t overshadowed her other work. Choice B is incorrect. Neither text explicitly states that *The Death of Cleopatra* is Lewis’s most famous piece. Author 1 mentions it as one example of her historical works, but does not single it out as being more important or influential than *Hagar*. Author 2 does not mention it at all, focusing instead on her portrait busts. Choice C is incorrect. This choice isn’t supported by the texts. Neither text suggests that sculpting historical figures was a trend that faded quickly.

Question Difficulty: Easy

Question ID 88bb0f6f

Assessment	Test	Domain	Skill	Difficulty
SAT	Reading and Writing	Craft and Structure	Cross-Text Connections	

ID: 88bb0f6f

Text 1

A team led by Bernardo Strassburg has found that rewilding farmland (returning the land to its natural state) could help preserve biodiversity and offset carbon emissions. The amount of farmland that would need to be restored, they found, is remarkably low. Rewilding a mere 15% of the world’s current farmland would prevent 60% of expected species extinctions and help absorb nearly 299 gigatons of carbon dioxide—a clear win in the fight against the biodiversity and climate crises.

Text 2

While Strassburg’s team’s findings certainly offer encouraging insight into the potential benefits of rewilding, it’s important to consider potential effects on global food supplies. The researchers suggest that to compensate for the loss of food-producing land, remaining farmland would need to produce even more food. Thus, policies focused on rewilding farmland must also address strategies for higher-yield farming.

- Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view Strassburg’s team’s study?
- A. The author of Text 2 approaches the study’s findings with some caution, whereas the author of Text 1 is optimistic about the reported potential environmental benefits.
 - B. The author of Text 2 claims that the percentage of farmland identified by Strassburg’s team is too low for rewilding to achieve meaningful results, whereas the author of Text 1 thinks the percentage is sufficient.
 - C. The author of Text 2 believes that the results described by Strassburg’s team are achievable in the near future, whereas the author of Text 1 argues that they likely aren’t.
 - D. The author of Text 2 focuses on rewilding’s effect on carbon emissions, whereas the author of Text 1 focuses on its effect on biodiversity.

ID: 88bb0f6f Answer

Correct Answer: A

Rationale

Choice A is the best answer. Text 1 is extremely positive about Strassburg’s team’s findings, calling the potential results "a clear win in the fight against the biodiversity and climate crises." Text 2 is not as positive, arguing that while the findings point to "potential benefits," we also need to consider the "potential effects on global food supplies."

Choice B is incorrect. This isn’t a difference between the two views. Text 1 does present the 15% number as enough to achieve meaningful results, but that’s not what Text 2 takes issue with: rather, Text 2 argues that we need to consider the effect that rewilding this much farmland would have on food supplies. Choice C is incorrect. This isn’t a difference between the two views. Neither text mentions the timeline for achieving the results described by Strassburg’s team. Choice D is incorrect. This isn’t a difference between the two views. Text 1 focuses on rewilding’s effects on both carbon emissions and

biodiversity. Text 2 doesn't focus on rewilding's effect on carbon emissions at all. Instead, it focuses on a third factor: global food supplies.

Question Difficulty: Easy

Text 1

Polar bears sustain themselves primarily by hunting seals on the Arctic sea ice, but rising ocean temperatures are causing the ice to diminish, raising concerns about polar bear population declines as these large predators’ seal-hunting habitats continue to shrink. A 2020 study examining polar bear populations across the Arctic concluded that populations affected by sea-ice loss are at great risk of extinction by the end of the twenty-first century.

Text 2

Monitoring carried out by researchers from the Norwegian Polar Institute shows that the polar bear population on the Arctic archipelago of Svalbard remains stable and well nourished despite rapidly declining sea ice in recent years. The researchers attribute this population’s resilience in part to a shift in feeding strategies: in addition to hunting seals, the Svalbard polar bears have begun relying on a diet of reindeer meat and birds’ eggs.

Based on the texts, how would the researchers in Text 2 most likely respond to the conclusion presented in the underlined portion of Text 1?

- A. By noting that it neglects the possibility of some polar bear populations adapting to changes in their environment
- B. By suggesting that it is likely incorrect about the rates at which warming ocean temperatures have caused sea ice to melt in the Arctic
- C. By asserting that it overlooks polar bear populations that have not yet been affected by loss of seal-hunting habitats
- D. By arguing that it fails to account for polar bears’ reliance on a single seal-hunting strategy

ID: f52cc78c Answer

Correct Answer: A

Rationale

Choice A is the best answer. Text 2 describes how the Svalbard polar bears have adapted to the loss of sea ice by diversifying their diet and feeding on reindeer and seabird eggs, resulting in a “stable and well nourished” population despite environmental challenges. This counters the underlined claim that polar bears facing a loss of sea ice are at “great risk of extinction” by the end of the century.

Choice B is incorrect. Text 2 does not challenge the fact that sea ice is rapidly declining in the Arctic due to warming ocean temperatures. In fact, it states that the Svalbard polar bears have faced “rapidly declining sea ice in recent years.” Choice C is incorrect. The claim in Text 1 is specific to polar bear populations affected by the loss of seal hunting habitats, so unaffected populations are irrelevant to the claim. Also, Text 2 doesn’t mention any polar bear populations that haven’t yet been affected by loss of seal hunting habitats. It focuses on a population that has been affected by sea-ice loss but has managed to survive and thrive nevertheless. Choice D is incorrect. Text 2 doesn’t imply that polar bears rely on a single seal-hunting strategy. In fact, the researcher in Text 2 would say that Text 1 fails to account for polar bears’ ability to develop other hunting strategies and food sources.
